

Phosphorus and potassium additive that promotes flowering.

1 - 50 - 30

BUDBOOSTER

- ➕ ADDITIVE NUTRIENT
- 🌸 FLOWERING STAGE
- 🌱 DRY FERTILIZER

WHAT IT IS

Bud Booster is a specialty flowering additive used in conjunction with your regular fertilizer program. It helps promote blooming and assists in the plant's metabolism during the middle of the flowering stage.

HOW IT WORKS

Bud Booster is our original powdered bloom additive that delivers high amounts of phosphorus(P) and potassium(K) to your plants. Phosphorus promotes flower formation and increases overall yields during the flowering stage. Added phosphorous will also aid with photosynthesis and the plant's ability to uptake nutrients. Potassium helps improve the quality of your plant's flowers and starch production. Bud Booster also contains added boron(B) and nitrogen (N). Boron aids the plant's transport of sugars and the development of a healthier flower. Nitrogen plays a major role in basic plant functions, such as photosynthesis, that go into maintaining higher yields. All this results in an increase in flower mass and overall size to deliver an impressive crop yield. Bud Booster is a great choice for entry level growers looking to introduce a flowering additive into their feed program.

HOW TO USE IT

Use at a rate of 6 grams per 20 litres (1 teaspoon per 5 gallons) when buds are forming and continue with every fertilizer application during the blooming cycle. Stop using in the last week of flowering.

FOR USE IN

BUD BOOSTER GUARANTEED ANALYSIS

| | |
|---|-------|
| Total Nitrogen (N)..... | 1.0% |
| 1.0% Water Soluble Nitrogen | |
| Available Phosphate (P ₂ O ₅)..... | 50.0% |
| Soluble Potash (K ₂ O)..... | 30.0% |
| Boron (B)..... | 0.08% |

Derived from: Monopotassium Phosphate, Dipotassium Phosphate, Potassium Sulfate, Boric Acid, Soy Protein Hydrolysate.

ALSO CONTAINS NONPLANT FOOD INGREDIENT(S):
1.0% Vitamin B1 (Thiamine Hydrochloride)
