

**SUPPLYING A READILY AVAILABLE
BLEND OF CARBOHYDRATES TO
SUPPORT BENEFICIAL MICROBES.**

LIQUID WEIGHT

 LIQUID FERTILIZER  ADDITIVE NUTRIENT  FLOWERING STAGE

WHAT IT IS

Liquid Weight is a supplement blend of simple and complex carbohydrates that support the plant and beneficial microbial life in the root zone. This leads to an increase in the absorption of essential nutrients that help develop impressive aromatic flowers and fruits.

HOW IT WORKS

Liquid Weight is an expansive blend of carbohydrates that the plant and beneficial microbes utilize as a food source. Flowering plants tend to expend an enormous amount of energy to produce floral sites and fruiting bodies.

By supplying a readily available food source of carbohydrates, the plant can focus its energy on flowering and essential oil production instead of taxing itself trying to produce food.

Introducing carbohydrates via the root zone will benefit microbes that expand the root zone's ability to absorb nutrients and other vital fluids. Beneficial microbes do this by bonding with the plant's roots to break down larger elements into simple chemical components that are easier for the plant to uptake and absorb. This translates to increased yields in both mass and quality.

HOW TO USE IT

Mix 1 ml/L (4 ml/Gal) of water for every watering through the bloom cycle.

FOR USE IN

HYDROPONICS

DRAIN TO WASTE

RECIRCULATING

SOIL / SOILLESS
