OCEAN MAGIC

-  LIQUID FERTILIZER
-  ADDITIVE NUTRIENT
-  VEGETATIVE STAGE
-  FLOWERING STAGE

WHAT IT IS

Ocean Magic is a vegetative additive derived from Atlantic Sea Kelp that delivers a variety of benefits to your garden and plants. The wealth of ingredients found in Ocean Magic supports a number of functional properties such as rooting, reduction of environmental and plant stress, as well as the increase of overall vitality within your plants.

HOW IT WORKS

Ocean Magic is a natural kelp additive that is used in the vegetative stage to benefit the growth and vigour of your plants. It all starts with the naturally-derived Atlantic Sea Kelp that we use in our formula. Our kelp is cold-pressed to retain all of the vital minerals and nutrients and ensures there is no micronutrient deficiency when sprayed. It contains a wealth of nutrients, amino acids, biostimulants, and enzymes that your plant may miss out on without added kelp. When applied as a foliar spray, these elements work to improve nutrient uptake, plant vigour, as well as boost the plant's resistance from pests and diseases. Ocean Magic can also be applied as a root feed to directly benefit the development of the root zone for bigger yields in the flowering stage.

HOW TO USE IT

Shake well before use. For foliar feeding: Use 5 ml/L (19 ml/Gal) of water. Start spraying plants in weeks 2 to 4 of the grow stage and then once weekly for the next 2 to 3 weeks. Spray on dry leaves when no rain is expected. For direct root feeding: Dilute 0.5 ml/L (2 ml/Gal) of water and soak growing medium thoroughly.

FOR USE IN

HYDROPONICS

DRAIN TO WASTE

RECIRCULATING

SOIL / SOILLESS

FOLIAR APPLICATION
